

\$2.5M HIV Grant Goes to Group That Empowers Latinos

Funding from the Minority AIDS Initiative helps those at risk for HIV and substance use disorders.

September 16, 2019 By [Trent Straube](#)

The Association for the Advancement of Mexican Americans (AAMA) has been awarded a \$2.5 million federal grant to help minorities at risk for HIV and substance use. Specifically, the AAMA's prevention and counseling division will receive \$500,000 a year for five years from the Substance Abuse and Mental Health Services Administration (SAMHSA), an agency in the Department of Health and Human Services.

AAMA is a Houston-based organization that empowers the Latino community.

The grant is part of SAMHSA's Minority AIDS Initiative (MAI): Substance Use Disorder Treatment for Racial/Ethnic Minority Populations at High Risk for HIV/AIDS. You can read details about SAMHSA's MAI grants [here](#).

"Houston is one of the most diverse cities in the country," said AAMA board member and University of Houston professor Luis Torres, in an AAMA press release. "It is also a city with great health inequities and disparities in access to high-quality, evidence-based, culturally grounded treatment. This is especially true for members of racial and ethnic minority groups who struggle with substance use disorders and are at high risk for HIV. AAMA has a long history of engaging and working with these communities and is poised to make a significant impact in expanding access to treatment."

According to data from the Centers for Disease Control and Prevention (CDC), in 2017 gay and bisexual men made up about 66% of all HIV diagnoses in the United States; in the same year, Latinos accounted for 26% of new diagnoses.

AAMA's mission is "to inspire and empower Latinos to pursue their potential and achieve success. Our efforts are focused in the areas of education, workforce readiness and leadership development." Learn more at [AAMA.org](#).
