

Clean Needles Save Lives. In Some States, They Might Not Be Legal.

Studies have identified public health benefits associated with syringe exchange services, such as reducing HIV and hepatitis C infections.

May 20, 2024 By Ed Mahon, Spotlight PA , Sarah Boden , WESA and KFF Health News

Kim Botteicher hardly thinks of herself as a criminal.

On the main floor of a former Catholic church in Bolivar, Pennsylvania, Botteicher runs a flower shop and cafe.

In the former church's basement, she also operates a nonprofit organization focused on helping people caught up in the drug epidemic get back on their feet.

The nonprofit, [FAVOR ~ Western PA](#), sits in a rural pocket of the Allegheny Mountains east of Pittsburgh. Her organization's home county of Westmoreland has seen roughly [100 or more](#) drug overdose deaths each year for the past several years, the majority involving fentanyl.

Thousands more residents in the region have been touched by the scourge of addiction, which is where Botteicher comes in.

She helps people find housing, jobs, and health care, and works with families by running support groups and explaining that substance use disorder is a disease, not a moral failing.

But she has also talked publicly about how she has made [sterile syringes available](#) to people who use drugs.

"When that person comes in the door," she said, "if they are covered with abscesses because they have been using needles that are dirty, or they've been sharing needles — maybe they've got hep C — we see that as, 'OK, this is our first step.'"

[Studies have identified public health benefits](#) associated with syringe exchange services. The Centers for Disease Control and Prevention says these programs [reduce HIV and hepatitis C](#) infections, and that new users of the programs are more likely to enter drug treatment and more likely to stop using drugs than nonparticipants.

This harm-reduction strategy is supported by leading health groups, such as the [American Medical Association](#), the [World Health Organization](#), and the [International AIDS Society](#).

But providing clean syringes could put Botteicher in legal danger. Under Pennsylvania law, it's a misdemeanor to distribute drug paraphernalia. The [state's definition](#) includes hypodermic syringes, needles, and other objects used for injecting banned drugs. Pennsylvania is one of 12 states that do not implicitly or explicitly authorize syringe services programs through statute or regulation, according to a [2023 analysis](#). A few of those states, but not Pennsylvania, either don't have a state drug paraphernalia law or don't include syringes in it.

Those working on the front lines of the opioid epidemic, like Botteicher, say a reexamination of Pennsylvania's law is long overdue.

There's an urgency to the issue as well: Billions of dollars have [begun flowing](#) into Pennsylvania and other states from legal settlements with companies over their role in the opioid epidemic, and syringe services are among the eligible interventions that could be supported by that money.

The opioid settlements reached between drug companies and distributors and a coalition of state attorneys general included a list of [recommendations for spending](#) the money. Expanding syringe services is listed as one of the core strategies.

But in Pennsylvania, where 5,158 people died from a drug overdose in 2022, the state's drug paraphernalia law stands in the way.

Concerns over Botteicher's work with syringe services recently led Westmoreland County officials to [cancel an allocation of \\$150,000](#) in opioid settlement funds they had previously approved for her organization. County Commissioner Douglas Chew defended the decision by saying the county "is very risk averse."

Botteicher said her organization had planned to use the money to hire additional recovery specialists, not on syringes. Supporters of syringe services point to the cancellation of funding as evidence of the need to change state law, especially given the recommendations of settlement documents.

"It's just a huge inconsistency," said Zoe Soslow, who leads overdose prevention work in Pennsylvania for the public health organization [Vital Strategies](#). "It's causing a lot of confusion."

Though sterile syringes [can be purchased from pharmacies](#) without a prescription, handing out free ones to make drug use safer is generally considered illegal — or at least in a legal gray area — in most of the state. In Pennsylvania's two largest cities, [Philadelphia](#) and [Pittsburgh](#), officials have used local health powers to provide legal protection to people who operate syringe services programs.

Even so, in Philadelphia, Mayor Cherelle Parker, who took office in January, has [made it clear](#) she opposes using opioid settlement money, or any city funds, to pay for the distribution of clean

needles, The Philadelphia Inquirer has reported. Parker's position signals a [major shift](#) in that city's approach to the opioid epidemic.

On the other side of the state, opioid settlement funds have had a big effect for [Prevention Point Pittsburgh](#), a harm reduction organization. [Allegheny County reported](#) spending or committing \$325,000 in settlement money as of the end of last year to support the organization's work with sterile syringes and other supplies for safer drug use.

"It was absolutely incredible to not have to fundraise every single dollar for the supplies that go out," said Prevention Point's executive director, [Aaron Arnold](#). "It takes a lot of energy. It pulls away from actual delivery of services when you're constantly having to find out, 'Do we have enough money to even purchase the supplies that we want to distribute?'"

In parts of Pennsylvania that lack these legal protections, people sometimes operate underground syringe programs.

The Pennsylvania law banning drug paraphernalia was never intended to apply to syringe services, according to [Scott Burris](#), director of the [Center for Public Health Law Research](#) at Temple University. But there have not been court cases in Pennsylvania to clarify the issue, and the failure of the legislature to act creates a chilling effect, he said.

Carla Sofronski, executive director of the [Pennsylvania Harm Reduction Network](#), said she was not aware of anyone having faced criminal charges for operating syringe services in the state, but she noted the threat hangs over people who do and that they are taking a "great risk."

In 2016, the [CDC flagged three Pennsylvania counties](#) — Cambria, Crawford, and Luzerne — among 220 counties nationwide in an assessment of communities potentially vulnerable to the rapid spread of HIV and to new or continuing high rates of hepatitis C infections among people who inject drugs.

Kate Favata, a resident of Luzerne County, said she started using heroin in her late teens and wouldn't be alive today if it weren't for the support and community she found at a syringe services program in Philadelphia.

"It kind of just made me feel like I was in a safe space. And I don't really know if there was like a come-to-God moment or come-to-Jesus moment," she said. "I just wanted better."

Favata is now in long-term recovery and works for a [medication-assisted treatment](#) program.

At clinics in Cambria and Somerset Counties, [Highlands Health](#) provides free or low-cost medical care. Despite the legal risk, the organization has operated a syringe program for several years, while also testing patients for infectious diseases, distributing overdose reversal medication, and offering recovery options.

Rosalie Danchanko, Highlands Health's executive director, said she hopes opioid settlement money can eventually support her organization.

“Why shouldn’t that wealth be spread around for all organizations that are working with people affected by the opioid problem?” she asked.

In February, [legislation to legalize syringe services](#) in Pennsylvania was approved by a committee and has moved forward. The administration of Gov. Josh Shapiro, a Democrat, supports the legislation. But it faces an uncertain future in the full legislature, in which Democrats have a narrow majority in the House and Republicans control the Senate.

One of the bill’s [lead sponsors](#), state [Rep. Jim Struzzi](#), hasn’t always supported syringe services. But the Republican from western Pennsylvania said that since his brother died from a drug overdose in 2014, he has come to better understand the nature of addiction.

In the [committee vote](#), nearly all of Struzzi’s Republican colleagues opposed the bill. State Rep. [Paul Schemel](#) said authorizing the “very instrumentality of abuse” crossed a line for him and “would be enabling an evil.”

After the vote, Struzzi said he wanted to build more bipartisan support. He noted that some of his own skepticism about the programs eased only after he visited Prevention Point Pittsburgh and saw how workers do more than just hand out syringes. These types of programs connect people to resources — overdose reversal medication, wound care, substance use treatment — that can save lives and lead to recovery.

“A lot of these people are ... desperate. They’re alone. They’re afraid. And these programs bring them into someone who cares,” Struzzi said. “And that, to me, is a step in the right direction.”

At her nonprofit in western Pennsylvania, Botteicher is hoping lawmakers take action.

“If it’s something that’s going to help someone, then why is it illegal?” she said. “It just doesn’t make any sense to me.”
